EDUCATION

Indiana University, Luddy School of Informatics – Bloomington, IN *May 2028*
Bachelor of Science in Computer Science, AI Concentration; Minor in Entrepreneurship **GPA: 3.3/4.00**
Coursework: Data Structures, Generative AI & Applications, Data Analysis & Mining, Systems Programming in C, Software Systems (Java), Discrete Structures

Columbia Business School – New York, NY *June 2022 – July 2022*
Pre-College Summer Program, Entrepreneurship

PROFESSIONAL EXPERIENCE

Shopify E-commerce Store – Remote *August 2025 – February 2026*
Co-Founder
- Co-founded a dropshipping store with a partner; owned the Shopify storefront, product research (Kalodata, TikTok), and supplier sourcing from Alibaba/AliExpress
- Ran Meta ad campaigns at $100–200/day, testing ~10 products and scaling spend onto winners; top product did $1.5K in sales in its first 7 days

Whole Foods Market – Wheaton, IL *July 2025 – August 2025*
Ecommerce Team Member
- Fulfilled 15–20 online orders per shift at 98%+ accuracy, shopping an average of 60+ items per hour

American Income Life Insurance Company – Aurora, IL *February 2024 – August 2024*
Appointment Setter
- Managed outbound prospecting to engage prospective clients and schedule consultations with senior sales representatives
- Qualified leads and kept CRM records current, including follow-ups with unresponsive leads, to support agents in closing policies

Azuro.Framer.AI – Naperville, IL *June 2023 – November 2023*
Co-Founder
- Built AI chatbot prototypes and workflow automations for real estate companies, using natural language processing tools to handle lead qualification and customer inquiries
- Led product development and iteration based on user testing, refining chatbot flows to improve usability and conversation quality
- Ran outbound sales and discovery calls with real estate firms, and recruited and managed a small sales team to expand outreach capacity

PROJECTS

Personal Portfolio Website (parth-os) *2026*
Next.js, React, TypeScript, HTML Canvas, Vercel
- Built and deployed a Linux-style desktop site with a boot/login flow, snapping windows, and four interactive ASCII wallpapers drawn on canvas
- Built a paper-trading game on live Hyperliquid prices for BTC, ETH, and SOL with spot and up-to-10x perps, take-profit/stop-loss, and liquidations
- Added a working terminal with hidden secrets, a VS Code–style editor showing the site's own source, and a music app built on SoundCloud's player

Crypto Trading Strategy Backtester *2026*
C, UNIX, Git
- Built a multi-file backtesting engine in C that loads OHLC price data from CSV and simulates a configurable buy-the-dip strategy
- Designed modular data, strategy, and reporting components with dynamic memory management and input validation; output trade logs and performance reports to terminal and file

Blackjack Card Counting Simulator *2025*
Python, Matplotlib
- Built a Monte Carlo simulator comparing Hi-Lo card counting against flat betting across 100 trials of 10,000 hands each (2M+ hands analyzed)
- Visualized variance with statistical distributions, showing that even with a ~1% theoretical edge, flat betting outperformed counting in 46% of simulations

SKILLS & INTERESTS

Languages: Python, Java, C, JavaScript, TypeScript, HTML/CSS
Frameworks & Tools: React, Next.js, Django, Git/GitHub, UNIX/Linux, Vercel, Streamlit, Matplotlib
Interests: Crypto & Perps Trading (since 2021), Music Production, Sports Cars, Fashion, Fitness, Pickleball
